

# Ferðing hjá upsa

# Hví vilja vit vita hvussu fiskur ferðast?

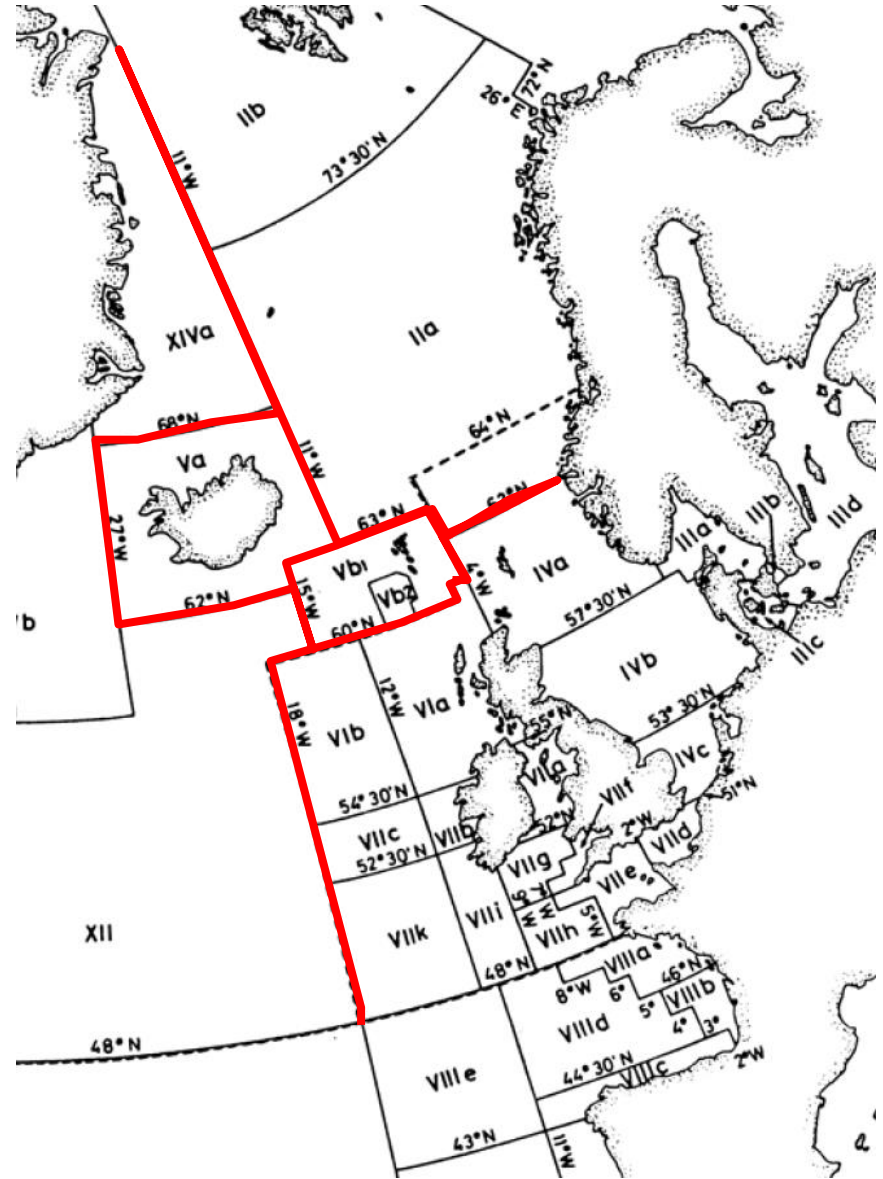

- Fyri at gagnnýta stovnin best, er neyðugt at vita, hvussu avbyrgdur stovnurin er.
- Merkiroyndir geva vitan um, í hvønn mun fiskurin verður afturfingin í øðrum økjum

# Her livir uppsin

# Upsastovnarnir í Norðuratlantshavi

- Vit rokna upsan sum fýra skildar stovnar
- Ferðing er áður víst millum upsastovnarnar
- Í hesum kanningum, verða somu mørkini nýtt at skilja millum øki

# Afturfingnir fiskar

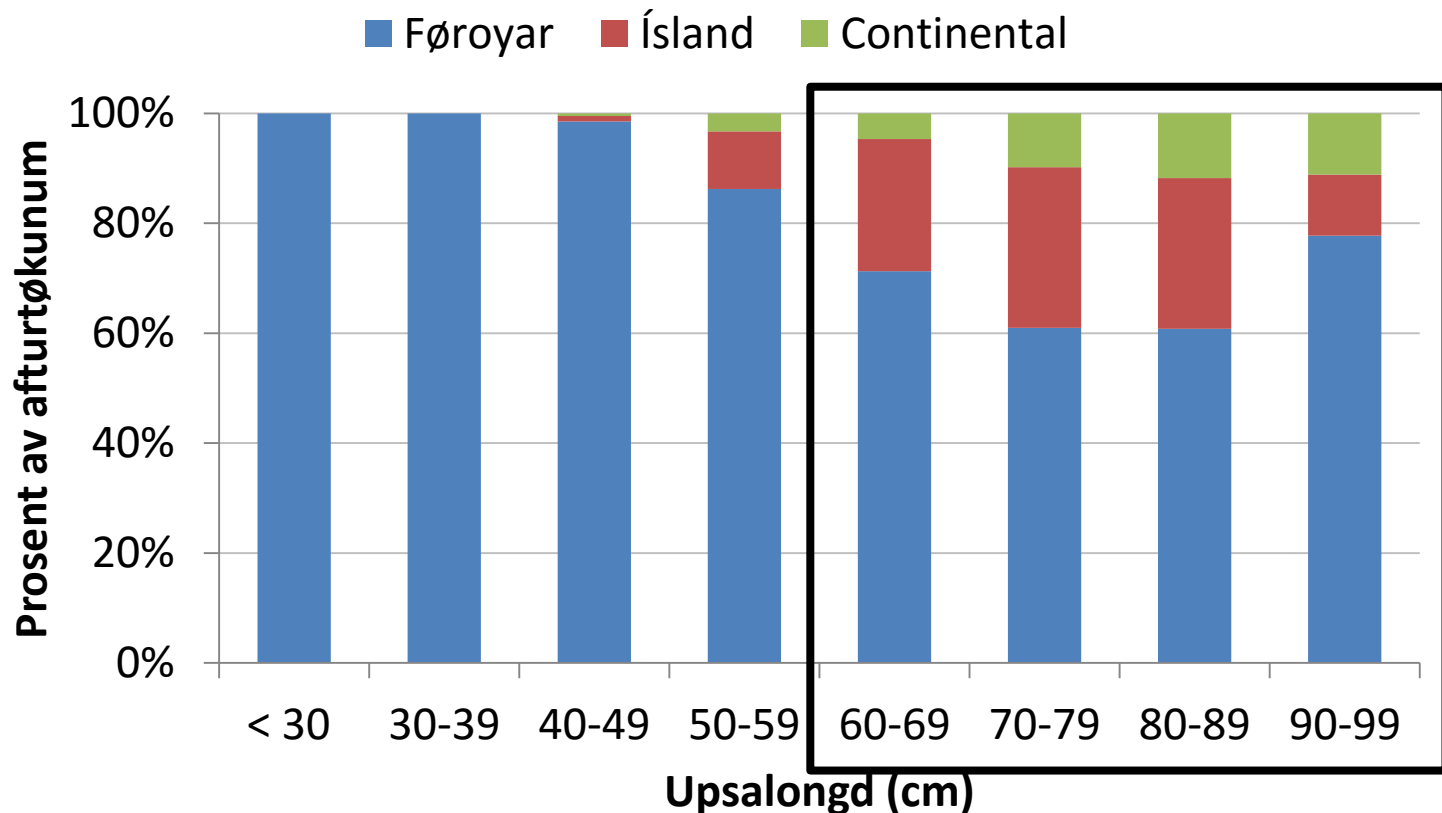

# Útbreiðslan av upsalongdarbólkum á Landgrunninum í august

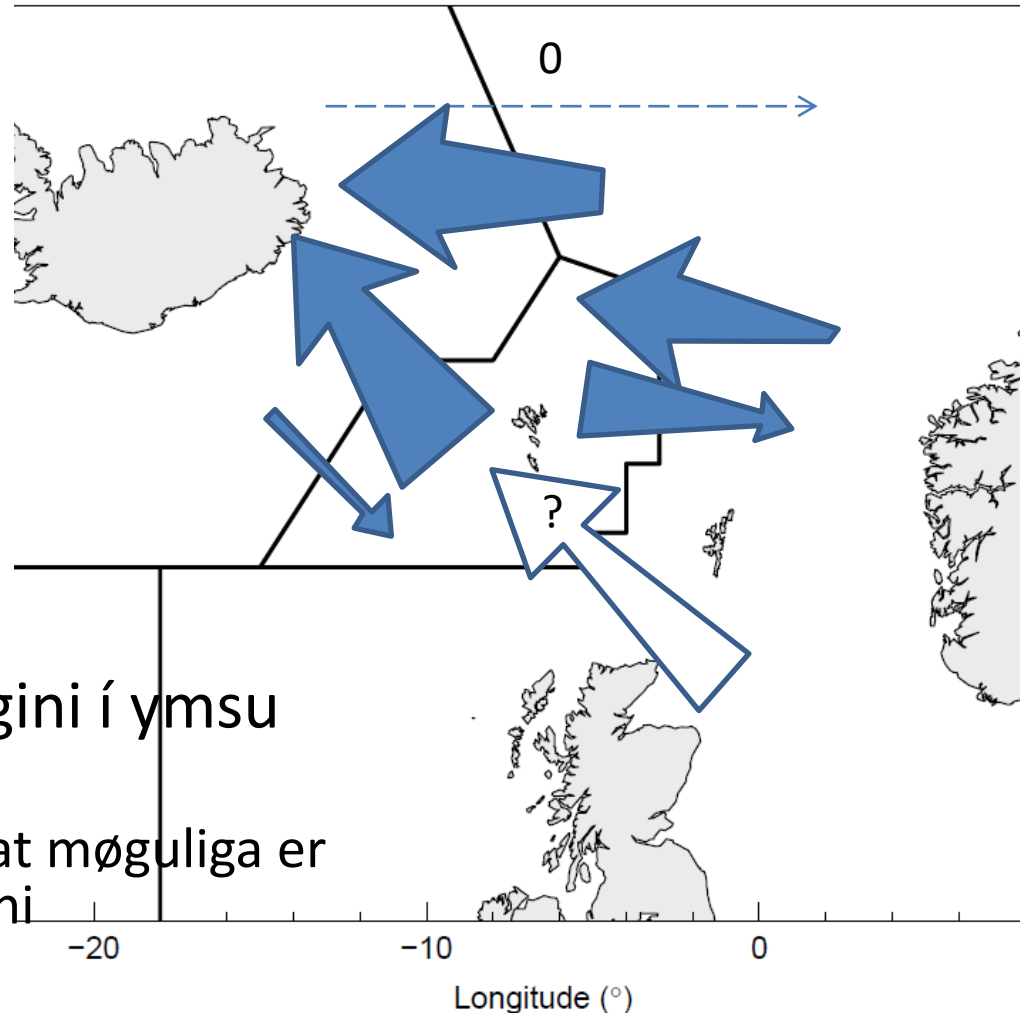

# Ferðingin hjá føroyska upsanum

- Tess størri uppsin var, tess størri partur varð afturfingin uttanfyri føroyska øki
- Tá upsi var størri enn 60 cm vóru 25% afturfingin í íslenskum øki

# Soleiðis ferðast vaksni uppsin millum økini

- Ferðingin millum økini er ymisk
- Føroyar
  - stór útferðing
  - nakað av innferðing
- Ísland
  - so at siga ongin útferðing
  - stór innferðing
- Continental
  - nakað av útferðing
  - avmarkað innferðing
- Vit síggja ikki mun í ferðingini í ymsu tíðarskeiðunum
  - Glopp í merkingini gera tó, at møguliga er ferðingin ikki konstant kortini

- Øll øki eru ikki kannaði í senn – og onkur øki eru enn illa kannaði
  - → ikki klárt at brúka í stovnsmetingum
- Úrslitini vísa/stuðla at
  - okkara fatan av skildum upsastovnum er røtt
  - týðandi ferðing er millum upsastovnarnar
  - nýggjar samskipaðar merkingar eru neyðugar, har upsi í øllum økjum verður merktur í senn.

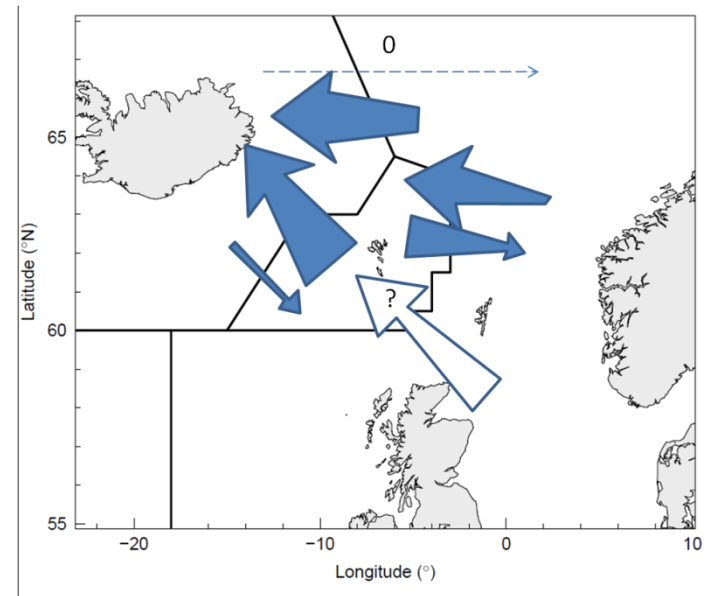

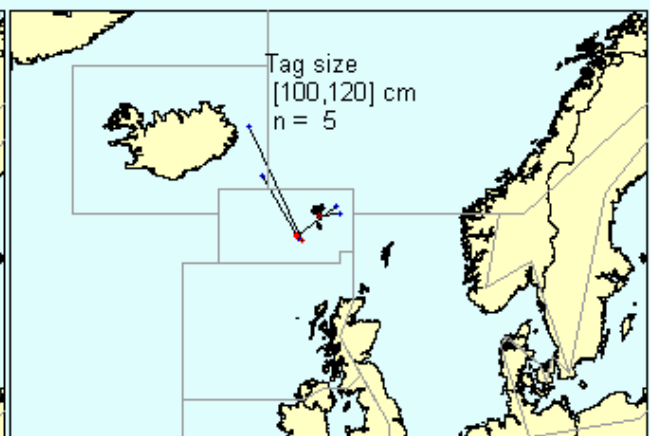

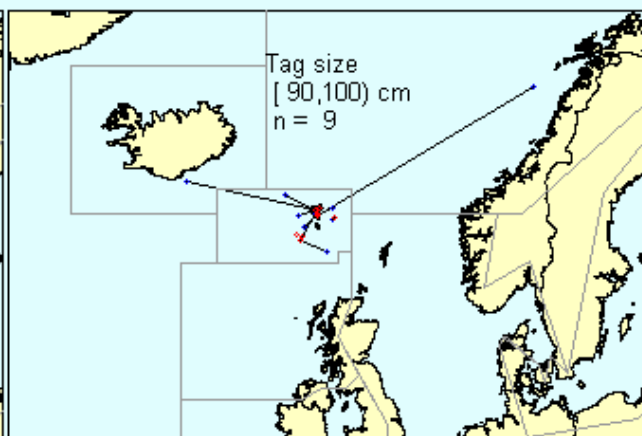

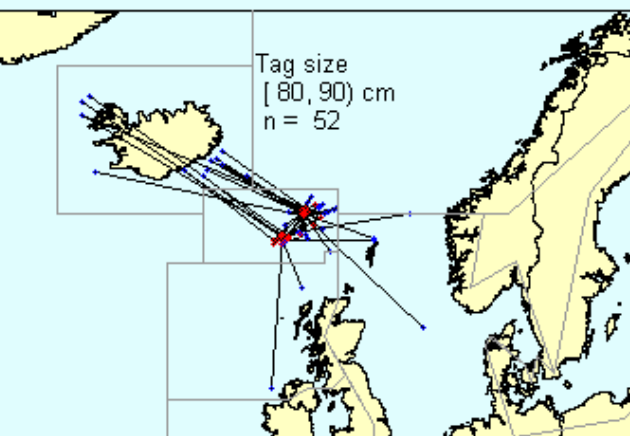

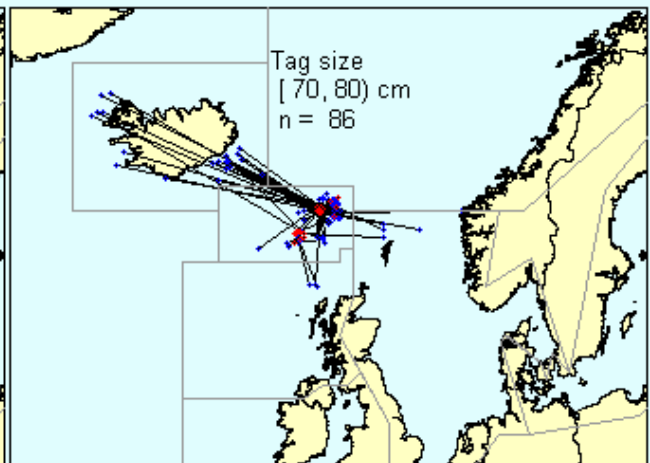

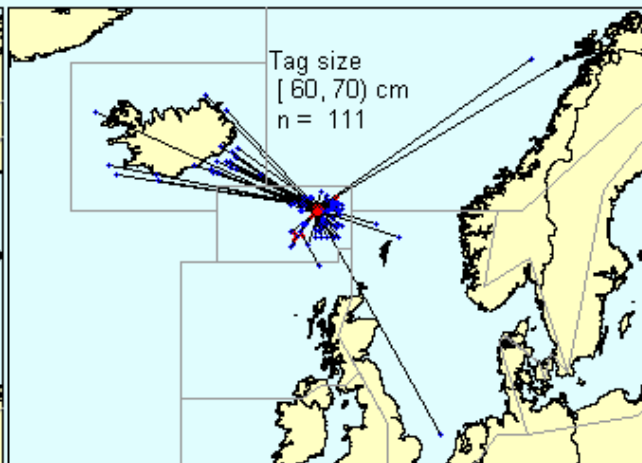

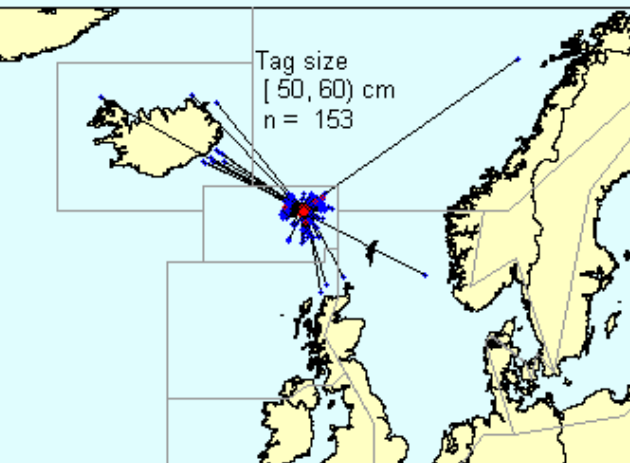

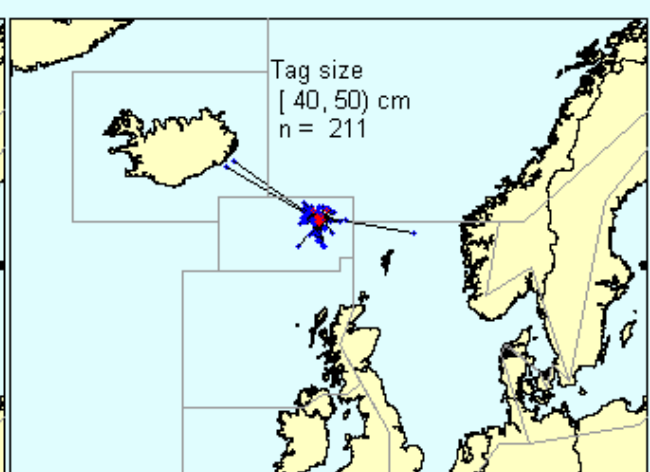

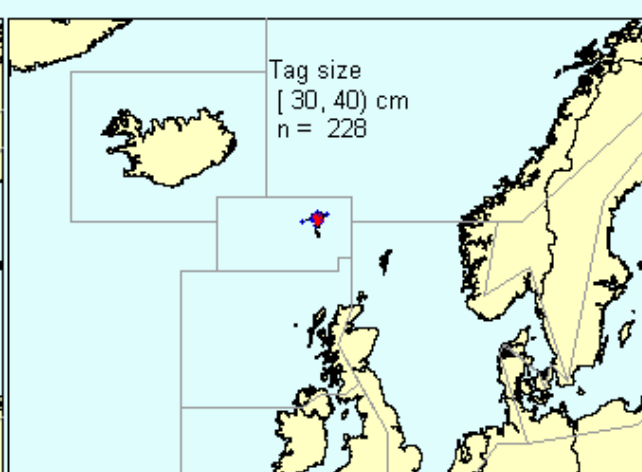

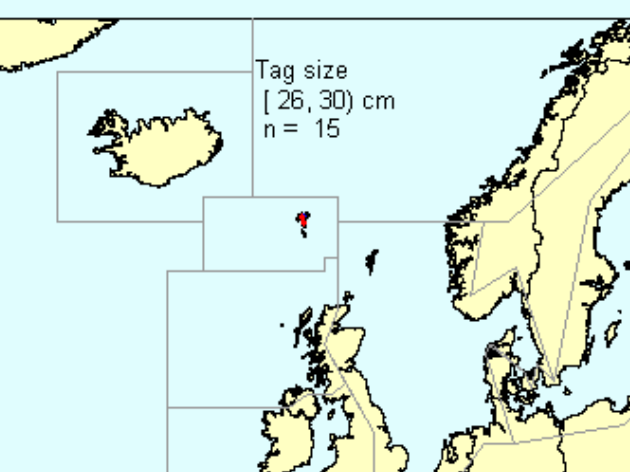

Takk fyri

- Different migration rates

# Ferðingin millum lönd

## Iceland

- virtually no emigration
- pronounced immigration

## Faroes

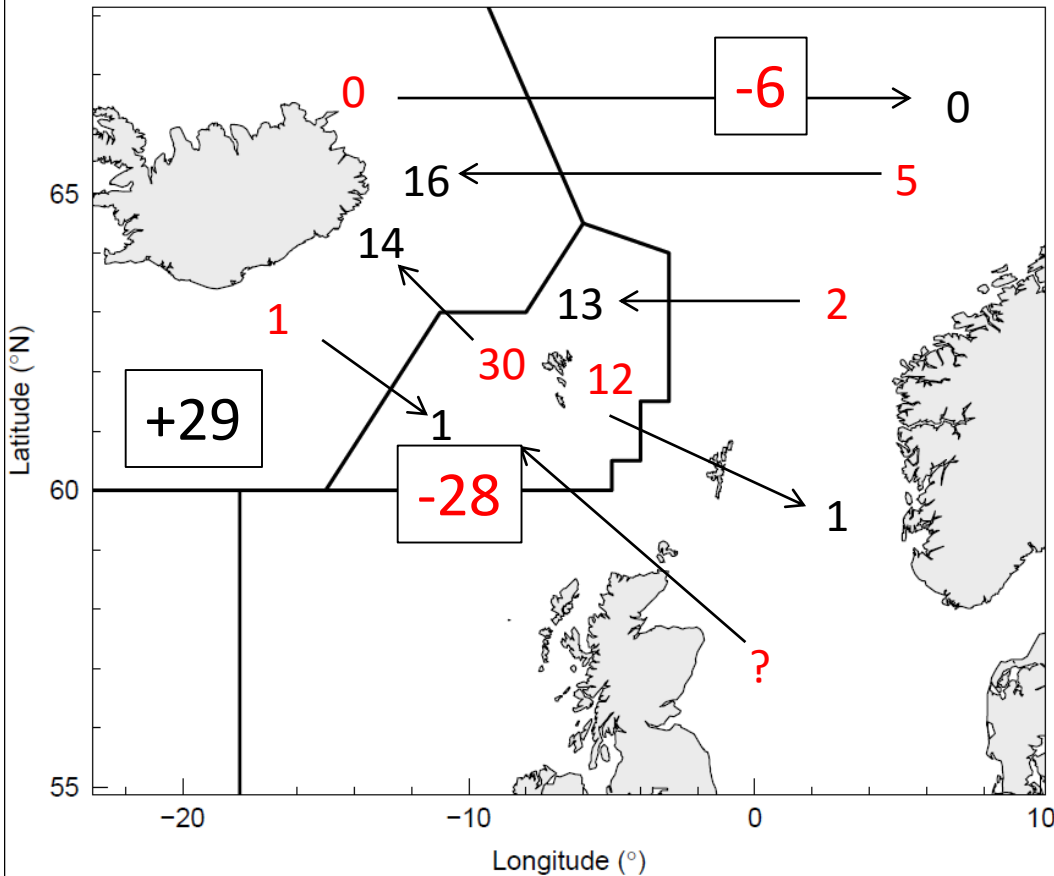

- pronounced emigration
- some immigration

## Continental

- intermediate in emigration
- limited immigration

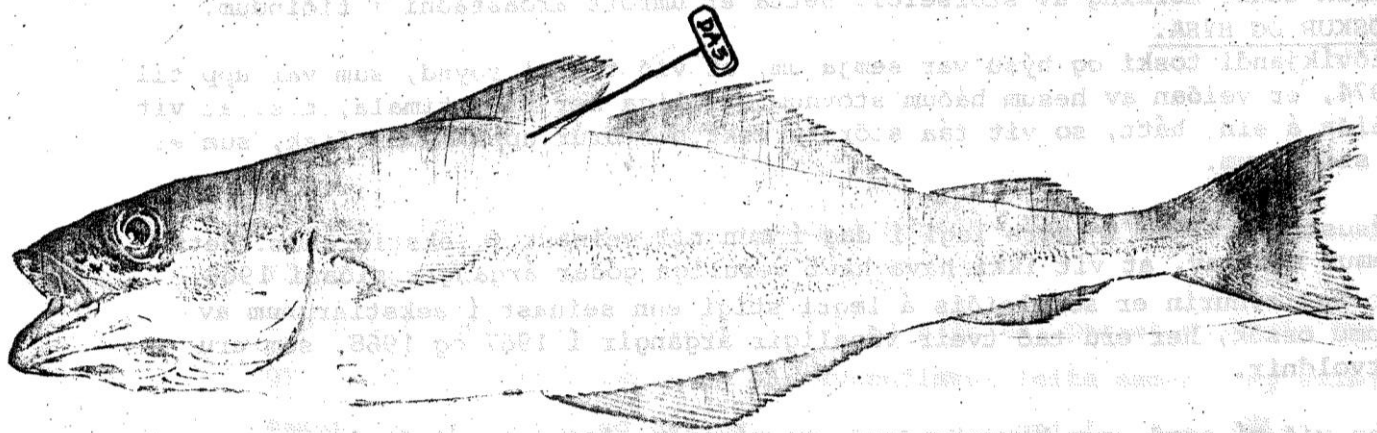

## Temporal analyses showed no significant differences

- though, we can not dismiss temporal variability, because taggings differed in time and space

## UPSAMERKING

Sum nevnt aðrastaðni í "TÍÐINDUM", so hefur tað stóran týðning fyrri at kunna meta um úrtökuna av upsastovninum, at vit vita, hvussu hann ferðast.
